

# Comparing Schemas

Only in DbVisualizer Pro

 This feature is only available in the DbVisualizer Pro edition.

While DbVisualizer does not provide a way to fully show the differences between two schemas in terms of objects and data, you can compare different aspects of a schema to another schema one by one.

For instance, to compare the list of tables in one schema with the list of tables in another schema:

1. Expand the schema node for the first schema and select its **Tables** node and open it in a new Object View tab, select the **Tables** tab,
2. Do the same for the second schema,
3. Select "**Compare...**" from the right-click menu in one of the Tables grids to [compare their grid content](#), or **select** Tools->Compare.

You can do the same for all the other schema object types, such as views and stored procedures. You can also dig deeper and compare the individual objects, such as [comparing individual tables](#).
